Are Male Enhancement Ultraceuticals Sold Online Safe, Natural and Compliant with their Label Claim?

Nadine Amine, Cindy Zheng, Harshvir Kaur, Jessica Sweeney, Mark Mikail, Heba A. Eassa and Mohamed Ismail Nounou

Department of Pharmaceutical Sciences (DPS), University of Saint Joseph (USJ), USA

Abstract

Purpose: To draw attention to the possible adulteration, counterfeit and safety concerns related to ultraceuticals.

Methods: We investigated the top ten male enhancement ultraceuticals sold online on Alibaba, General Nutrition Centers, eBay, and Amazon as an example of misbranded, mislabeled products with unverified therapeutic claims.

Results: It was found that title and description of the products contained unverified therapeutic claims that contradict FDA disclaimer label. Ensuring 100% safe, natural, and of high quality with zero additives were seen on the labels of some products. In some cases, many ingredients were not listed in the label or even the ingredients label was completely omitted.

Conclusion: Adulterated and counterfeit nutraceuticals are being consumed despite their safety, efficacy, and regulation issues. Ultimately, regulatory authorities should instill regulations in order to monitor, examine, and test the ultraceutical market and the research community should draw public attention to the possible effects of these products on consumers.

Keywords: Nutraceuticals; Food adulteration; Falsified drugs; Male impotence; Phosphodiesterase 5 inhibitors

Introduction

Natural, organic, chemical free, and homeopathic, are all buzzwords consumers tend to associate with safety and efficacy. In many cases, such marketing terminology are misleading and deceitful [1]. Many people seek out this terminology when purchasing dietary supplements and vitamins. Health organizations and researchers have attempted to introduce policies to regulate these industries and have largely failed due to a lack of interest [2-5]. Ultraceutical formulations are expanding widely to include products that include male-enhancement, weight loss, cognitive enhancement products. The U.S. Food and Drug Administration (FDA) has very limited control over dietary supplements. The FDA only regulates the labeling of these products in the United States, requiring a disclaimer label stating “This statement has not been evaluated by the FDA. This product is not intended to prevent, cure or treat any disease” [6]. Despite this, the advertised claims, trade names, and even the shape of the pills suggest therapeutic effects as seen on their online retail stores.

Online sale of ultraceuticals: A market place unchecked

The absence of regulatory laws, enforcement, and oversight of the ultraceutical industry promotes the production and adulteration of the products being sold; thus, encouraging their trade throughout online retail stores including Alibaba, GNC, eBay, and Amazon [7-10]. This is a major area of sales for unregulated ultraceutical sales in the United States. In March 2019, over 10,000 and 10,938 male enhancement nutraceuticals were advertised on Amazon and eBay, respectively [8,9]. Tables 1-4 list the top ten male enhancement ultraceuticals sold online on Alibaba, GNC, eBay, and Amazon [7-10]. Comparing the four markets, it is observed that the label on the products contains the required FDA disclaimer label. However, in the title and description of the products is where consumers will find many unverified therapeutic claims. On Alibaba and eBay [7,9] (Table 2 and 4), claims are aggressive, stating they are 100% safe, natural, and of high quality with zero additives, as seen on the labels. Such claims do not comply with the FDA labeling requirements for dietary supplements [11]. In case of Alibaba and eBay [7,9], many ingredients are not listed in the description and many omit the ingredients label on the bottle. As for Amazon [8] (Table 1), most products are claimed to be natural, however, the ingredients are clearly shown in the product description. As for General Nutrition Centers (GNC) (Table 3), ingredients and uses are clearly stated in the description with clear ingredient labels and pictures of the product. All these male enhancement ultraceuticals sold online have therapeutic claims, such as boosting testosterone, increase strength, or increase sexual health [10].

Contents and Concerns

Ultraceuticals are not all safe, despite common misconception. This can be attributed to their unnecessary use, unknown ingredients, and low pharmaceutical quality [1,12-16]. Some products in the ultraceuticals category have been found to contain pesticides, heavy metals, and adulterants [17-20]. Adulterated products may contain incorrect parts of a plant or unreported Active Pharmaceutical Ingredients (APIs), as documented in previous cases [12,17-20]. Herbal adulteration has also been a problem. A recent study found male enhancement supplements contained at least 1 of 5 unreported plants of concern [21]. Other cases of adulteration of male-enhancement nutraceuticals with sildenafil,
vardenafil, or tadalafil have been previously reported [12]. Fraudulent adulteration may increase the therapeutic effect but is illegal, unethical, and can cause significant harm. Following consumption of the male enhancement supplement Rhino 7 Platinum 3000, a 25-year-old man required bilateral corpoglanular shunting to alleviate his priapism that had persisted for 48 hours; A follow up appointment demonstrated he is no longer able to maintain an erection and has significant bilateral fibrosis of the corporal bodies [22].

The purpose of the undocumented APIs spiking and adulteration is for manufacturers to increase the therapeutic effects of their products; simultaneously claiming them to be of natural origin in order to market their products in a more favorable, pleasing psychological influence to consumers [17-20]. Consumers are unaware of the true ingredients within these naturally claimed products, which make them susceptible to drug-drug interactions that can cause a great risk to their health and safety. It can ultimately cause permanent damage as seen in the case of Rhino 7 Platinum 3000 [22].

Many of the male enhancement ultracuticals sold online were found to be adulterated with reported or unreported analogues of FDA approved prescription phosphodiesterase-5 inhibitors (PDE5i) used to treat erectile dysfunction such as sildenafil, tadalafil, or vardenafil [1,11-12,15-16]. A study conducted by Pfizer Global Security and Research and Development teams found 81% of sexual performance ultracuticals contained adulterated PDE5 is, 45% of those contained more than the highest approved strength of the drug [23]. Novel PDE5i analogues such as Desmethyl Tricetylenimpred Sildenafil continue to be discovered in this class of dietary supplements [24]. The presence and quantity of these adulterants is of great concern due to the known risks associated with this class of FDA approved drugs and the uncertainty of the safety of the untested PDE5i analogues. ZenMaxx, Instant Hard Rod, and RigRx Plus were all found to contain amino-tadalafil, an analog of tadalafil [25]. This interacts with nitrates found in some prescription drugs and may dangerously lower blood pressure [5,26-27]. These products pose a threat to patients with diabetes, high blood pressure, high cholesterol, or heart disease [28]. Many of the products described above can be seen on the FDA list of tainted products marketed as dietary supplements though, based on a survey of current literature, however, it is by no means a comprehensive list [11].

**Action Required**

Nutraceuticals and ultracuticals are advertised as purely natural products free from side effects. They are widely sold online via major retail stores such as Amazon, eBay, and Alibaba from unknown sources from all over the world, mostly with a therapeutic claim that violates FDA and DSHEA guidelines [6-9]. Literature review shows that these products are adulterated, misbranded, mislabeled, are of low pharmaceutical quality, and may be dangerous because of the presence of undeclared plant products and APIs. These products often contain disingenuous review from which consumers base their decision making [29]. Health organizations and governments are aware of the illegal manufacture and sale of adulterated and counterfeit nutraceutical formulations, yet no laws or regulations are enforced to tackle this global problem [30].

**Conclusions and Future Directions**

There are expanding issues around adulterated and counterfeit nutraceuticals globally. There seems to be gray areas in the U.S. market where these nutraceuticals are being sold regarding their claim, safety, efficacy, registration, sales, and regulation.

• Made in the USA,  
• #1 best male enhancement pill that helps enhance sex |                                                                                                  |
| 8 Best Herb Big Girth            | Tribuldis extract, tongkat ali extract, ginseng, centellia asiatica gotu kola, gingko biloba, buate superba, and reishi | • 100% natural and safe  
• No fillers, binders, or artificial ingredients  
• Increases sexual stamina  
• Bigger and harder erections  
• Boost sexual power and libido |                                                                                                  |
| 9 Extensions IV                  | Maca root powder, tribuldis terrestris, polypodium vulgare powder, muira puama root powder, L-arginine, panax ginseng root powder, lhorny goat weed extract, and incarins | • Extreme pharmaceutical grade male formula with extreme strength  
• All-natural ingredients with scientifically proven and permanent results of increasing size by 4-6 inches |                                                                                                  |
| 10 Dignity Bio Labs Viril X      | Not reported                       | • Authentic product  
• Natural male enhancement  
• Increases size, stamina, and strength |                                                                                                  |

Male enhancement nutraceuticals which are sold freely online should be researched, analyzed, and evaluated with respect to claim, content, safety, and efficacy. Researchers should be encouraged to investigate the quality, safety, and efficacy of supplements suspected to have illegal therapeutic claims. Technologies should be utilized for the fast and accurate detection of adulterants and counterfeit products. These technologies include Near Infra-Red (NIR) spectrophotometry or simple spectrophotometric analysis [1,31-32]. This problem has led to the development of innovative detection technologies including portable drug identification devices such as Si-Ware systems fully integrated chip-sized spectral sensor (NeoSpectra™ sensors) and Stratio LinkSquare pen spectrophotometer for industrial and consumer markets [31,32]. NeoSpectra™ sensors are compact and low-cost Fourier Transform Near InfraRed (FT-NIR) spectral sensors that can provide portable, fast and accurate analyses for medical and pharmaceutical application. Such systems can be used for the fast and accurate detection of adulterants and counterfeit products in the pharmaceutical industry sector, insurance agencies, law enforcement agencies, airports and retail pharmacies along with consumers [32]. They deliver the spectral response of the light absorbed by materials for quantification, qualification or identification [32]. Moreover, the development of rapid and accurate analytical techniques is critical. A new assay has been developed to rapidly detect PDE5 inhibitors using fluorescence that can even successfully uncover new analogues in low concentrations [33]. Nutraceuticals research is critical for online marketplace warehouses, regulatory agencies, and consumers with respect to safety, efficacy and quality.

Ultimately, this problem is the result of a rapidly growing industry going unchecked. Global and national health organizations should implement new regulations or enforce existing regulations for nutraceuticals to protect consumers and hold those who profit from their manufacture, distribution, and sale accountable for adverse effects.
