Gum disease -“periodontitis”-is now admitted as being associated with and a positively correlated causal factor in rheumatoid arthritis and joint pain, among much chronic disability. The dental profession uses the term “oral-systemic link” to explain that what occurs in the mouth has an impact throughout the entire body. This fact had been denied since the last century, about 1947, when the profession voted out the focal theory of infection, only to revive it in the past decade of this century.

Most humans admit that chewed food-through the mouth-is absorbed into the body-through the stomach. Oral-Systemic Link! Professionals are educated to make things complex for we dentists often cannot see these pathways, due to looking down in the mouth for too long-myopia. In 1907 it was commonly known among physicians and dental surgeons that “oral sepsis” was a fact, that a pathway to good and sustainable health was oral health. From The Dental Cosmos of 1907 by GB Mitchell, DDS: “It is generally accepted knowledge that oral sepsis is a contributing cause in numerous cases of tonsillitis and influenza-the bacillus of influenza having its breeding-place in the septic mouth.” Most dental professionals are still unaware of-perhaps also deny-this oral systemic linkage (oral sepsis), however, since it might bring into question the rationale of dental implants and root canals as treatment solutions.

Two hundred thirty root-canal teeth (cadavers) in our 30-year study show acute and chronic inflammation (and more), “apical periodontitis”-a deep root version of periodontitis. Every one of these extracted dead teeth-root canals-were infected as reported by a board certified pathologist at Queen’s Hospital in Honolulu. Implants show the same results. Unlike real teeth and bone, an implant screw in your jaw is an open wound waiting for infection leading to “peri-implantitis.”

The dental profession’s endodontists (endo morticians) are the only branch of medicine that advocates leaving gangrene in the jaws-“root-canal-cadavers”-and creating open wounds passing as dental implants. Yes, one may get away with these methods for a while, but the innate wisdom of the God-given human body will reject

the vermin ultimately. We knew this a hundred years ago, and now awoken to it once more.
